

HIGHWAY ASSET MANAGEMENT SERVICE

Many local highway authorities across the UK are facing challenges in managing their vital, yet, ageing highway assets effectively, as a result of year-on-year budget reductions and a shortage of skills and other resources.

VolkerHighways has an asset management team dedicated to providing expert advice and technical support for the effective management of clients' highway assets, including street lighting and traffic management systems.

Our highway asset management service includes assisting highway asset owners to:

- Achieve value for money and efficiency savings through the implementation of a high-performing highway asset management system
- Optimise and extend the usable life and performance of their highway assets within budgetary, political, economic, and environmental constraints
- Define practical, realistic, and achievable levels of service, risk content and risk criteria
- Reap the benefits of implementing a highway asset management plan, including value for money and efficiency savings
- Maintain regulatory and statutory compliance and reporting
- Implement robust financial management systems, statutory valuation and financial reporting.

What one of our clients said

“ We have been very impressed with the professional approach to the work done in collaboration with VolkerHighways, in bringing our suite of highway asset management documents up to date and formulated. The engagement has been refreshingly flexible, working alongside an extremely busy operational highways team still delivering the day job. ”

Craig Jackson BEng (Hons), C.Eng., FIHE, highway maintenance and drainage manager for Bath and North East Somerset Council
